# Innovative tools for Speech and Language therapists

---

VoiceToys is a system of wirelessly connected devices, controlled by the mobile app.

It is used for auditive, visual and motoric stimulation with many types of senso-motoric and verbal disabilities, but it can be used with all kids as an early development toy.

It is developed in Serbia, in a team of experienced engineers and Speech therapists.

The system is modular, expandable and upgradable, according to client's needs. It is a new standard in Speech and special therapy.

# SurroundED

## Where is the sound coming from?

SurroundED is a system of five smart speakers, created primarily for patients with cochlear implants. It is used for exercising of sound localization.

Mobile application controls them and tracks patient's progress. Therapists touches the icon, selected speaker plays its sound. The app is connected to our web application which analyzes and tracks patient's progress.

Speakers emit colored lights which indicate if the patient gave the correct answer or not.

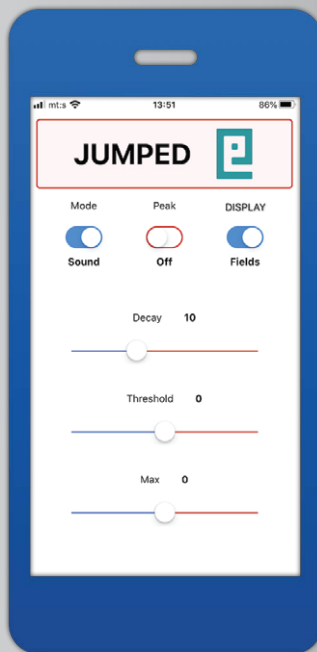

# JumpED

## How do you see the sound?

---

This unique device “jumps” as it listens to your patient’s voice. But it’s not all. It jumps even when they jump!

Display modes, colors, speed of the reaction, sensitivity, peak indication and other parameters are controlled by the mobile app.

It connects wirelessly to the optional trampoline sensor. It is simply placed underneath the trambuine. Jumping on the trambuline produces the reaction of the lights.

# Spread

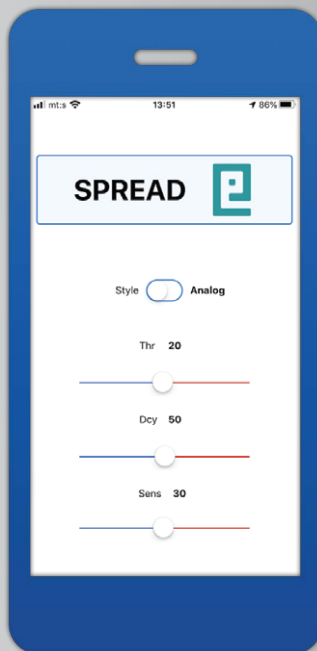

## How far does my voice go?

---

These shining rods, wirelessly connected to each other, are giving your patient sense of distance that his voice reaches.

Sensitivity and mode of operation are set via mobile app.

They are motivating patients to vocalize and work, and they help exercise voice intensity control.

# StimulatED

## See and feel the sound

---

This neat, practical device, vibrates and produces gentle, beautiful colored lights. It reacts to sound level and pitch. It is compact and quality made, so you can give it to your patients to play with.

They feel and see their voice while using it.

It amuses, motivates and fascinates them. It makes therapy more interesting and helps correct basic voice impostation.
